

AUVSULA PAVAN CHARY

Hyderabad, Telangana | +91 63032 01259 | charypavan685@gmail.com | linkedin.com/in/pavan-chary-5863873aa | github.com/Pavan67u

PROFILE SUMMARY

Computer Science graduate from GITAM University who genuinely enjoys the process of building software figuring out how pieces fit together and seeing something work end-to-end. I pick up new tools quickly and work well in a team. Looking for a software developer role where I can contribute from day one and keep getting better.

EDUCATION

B. Tech — Computer Science and Engineering

GITAM University, Hyderabad

Hyderabad, India
Graduated: May 2026

CGPA: 7.68 | Coursework: Data Structures, DBMS, Operating Systems, OOP, Software Engineering

Intermediate — MPC

March 2022

Sri Chaitanya College, Madinaguda

Percentage: 85%

TECHNICAL SKILLS

Languages: Python, Java, C, SQL

Web & Backend: FastAPI, Flask, React, HTML/CSS, REST APIs

Databases: MySQL, SQLite schema design, indexing, query optimisation

AI / ML: YOLOv8 (object detection), vector search, RAG-based document Q&A

Tools: Git, GitHub, Docker, VS Code

INTERNSHIP EXPERIENCE

Software Intern — Ordnance Factory Medak (Government of India)

June 2025 – July 2025

Hyderabad, Telangana

- Designed and built a document retrieval system to replace manual search across legacy records in a defence manufacturing environment.
- Created a structured database schema (MySQL) to organise documents by type, date, department, and keyword removing duplicate entries.
- Built keyword-based search with indexed queries, significantly reducing lookup time compared to prior manual processes.
- Validated the system against 50+ test queries and documented the full solution across all SDLC stages.
- Delivered within a 6-week timeline as part of a 4-person team inside a security-cleared government facility.

PROJECTS

Smart Traffic Monitoring System

Python · YOLOv8 · Flask · Docker

- Built a real-time traffic violation detection system that process video input to identify and track vehicles across frames using Computer vision.
- Designed the violation logic to flag incidents like red-light jumping, lane breaches, generating annotated evidence images for each violation.
- Structured the project across 9 focused modules (detection, tracking, rules, training, web app, etc.) and packaged it with Docker.
- Outcome:** Complete pipeline from raw video to structured violation records, ready to run on any GPU-equipped machine without manual setup.

Intelligent Document Q&A Assistant

Python · FastAPI · React · Docker

- Built a full-stack AI system where users upload PDF documents and ask questions in plain English, receiving answers sourced directly from the document.
- Backend:** Extracts and processes PDF text, converts it into searchable vector representations, and uses a local AI model (Gemma 2:9B) to generate answers.
- Frontend:** Clean React interface with drag-and-drop PDF upload, live Q&A, and conversation history fully Dockerised for easy deployment.
- Outcome:** A working AI-powered document assistant demonstrating end-to-end integration of language models, vector search, and a modern web interface.

File Management & Retrieval System

MySQL · Docker

- Built a full-featured web portal for securely uploading, organising, and retrieving files
- Implemented 35+ features across the full file lifecycle: upload, preview, download, version history, trash/restore, file sharing, bulk operations, and activity logging.
- Added user authentication role-based access, favourites, per-file comments, and an admin panel for user management.
- Outcome:** Production deployed document management system with a normalised MySQL schema, Git version control.

CERTIFICATIONS & LEARNING

- Java Developer Certification — Infosys Springboard (Core Java, OOP, Collections, Exception Handling, JDBC)
- Data Analytics Essentials — Cisco Networking Academy (Data literacy, statistics, spreadsheet analysis, visualisation)
